

### One Family's Journey . . .

For almost two years we searched for a diagnosis and treatment for our teenage daughter's constant headache, dizziness, insomnia, joint pains, weakness, and inability to walk more than a few steps at a time. Her symptoms came on quickly, taking her from being a dancer and top student in her class down to being unable to walk or attend school.

Thankfully, we were directed to see Dr. Fraser Henderson in June 2009. He correctly diagnosed and surgically corrected our daughter's spinal abnormalities, as well as her Chiari malformation. Today, she is dancing again and just graduated from high school at the top of her class.

In the months since her surgery, two more of our four children have been diagnosed with the same genetic condition and have both had successful surgeries performed by Dr. Henderson.

We could not be more pleased with our experience with Metropolitan Neurosurgery Group.
